

New listing. More Capabilities.

Listed with UL 864 to provide advanced smoke control features to Potter's IPA Series.

Smoke control is essential in redirecting hazardous smoke and fumes in the instance of a building fire. These systems save lives and assets which are otherwise at serious risk from smoke during a fire.

Potter V6 Software

Potter's IPA Series fire alarm control panels are being updated with V6 firmware. Among several great enhancements to this industry-leading line, V6 unlocks support for smoke control features.

The firmware can be updated in the field using the Update Utility Tool. Download V6 software at: ptr.us/V6

What is UL 864 & UUKL?

UL 864 is the standard for Control Units and Accessories for Fire Alarm Systems. It sets standards for construction, installation, control, and operation of smoke control devices and their accessories. All things that are necessary to support fire alarm systems. UUKL is a listing within UL 864 that establishes a rating for the equipment used within a smoke control system.

Both of these are established to ensure that equipment is manufactured and installed correctly so that it'll remain functional as long as possible to safeguard human life and reduce the spread of fire and smoke in the event of a fire. These ratings require rigorous testing under extreme conditions for the equipment being certified.

Update your IPA Series fire alarm control panel with the latest Update Utility Tool.
